Pacing, on demand

Whether you require temporary or instantaneous pacing, or hemodynamic monitoring with the security of pacing, Edwards Lifesciences will meet your needs. Each pacing catheter is part of the Swan-Ganz pulmonary artery catheter family and is backed by 24/7 technical support, clinical and interactive training, educational tools and more.

Bipolar pacing catheter

- Designed for temporary right ventricular endocardial pacing when the patient’s condition warrants
- Balloon tip facilitates insertion by flow direction
- A pair of electrodes at the tip provides capabilities for bipolar pacing

Swan-Ganz Paceport and A-V Paceport pulmonary artery catheters

While the Paceport catheter facilitates temporary ventricular pacing and the A-V Paceport catheter facilitates atrial, ventricular or A-V sequential temporary transvenous pacing, both catheters deliver basic hemodynamic monitoring, as well as:

- Right heart catheterization for right heart pressure measurements (PAS, PAD, PAOP) for diagnostic purposes
- Single point-in-time calculations of cardiac output using bolus thermodilution for diagnosing cardiac function
- Fluid infusion and RV pressure monitoring when the pacing probe is not inserted
- Available in oximetry Paceport catheter versions
Pacing and thermodilution Paceport catheters

Chandler transluminal pacing for A, V, or A-V pacing

- The Chandler transluminal v-pacing probe (model D98100) can be used with multiple Paceport catheter models for standby ventricular pacing when the patient’s condition warrants.

For over 40 years, Edwards Lifesciences has been helping you make proactive clinical decisions to advance the care of surgical and critical care patients. Through ongoing collaboration with you, ongoing education and our never-ending quest for advancement, Edwards develops solutions that provide the clarity to make proactive clinical decisions.
